

Minimization scale - Reduces food waste

Art 80090M

Reduce food waste through conscious choices and visualization

An important ingredient is simplicity

The Minimization scale is a simple concept cart with an integrated scale. On the trolley there is room for 1 pc GN 1/2 intended for food residues and 1 pc GN 1/6 which is intended for placing any scraping tool for food residues.

The aim is to reduce food waste through awareness and visualization. This measure, together with inspired competitions and other calculation activities about the climate impact of food thrown away during class time, has reduced food waste for, for example, the municipality of Kiruna for several years. With simple means, the Minimization scale reminds us of our own opportunity to influence the climate through everyday choices. This should be easy!

TECHNICAL DATA MINIMIZING SCALE CART

The trolley is made in a fully welded construction in stainless steel.

The entire construction is flushable IP65 with a hose for easy cleaning.

Cart dimensions: 600x525x755mm.

Scale plate dimensions: 355x305x128 mm.

Scale capacity: 150 kg. (Battery powered scale)
